

PMHRMS – Human Resource Management System

Software Overview & Phase-1 Documentation

1. Introduction

PMHRMS (PerkMinds Human Resource Management System) is a web-based, multi-tenant SaaS application used to manage basic HR operations of an organization.

The system supports multiple organizations on a single platform, where each organization's data is kept separate and secure.

PMHRMS is developed in phases so that the system is scalable and easy to enhance in the future.

2. Purpose of the System

The main purpose of PMHRMS is to:

- Store employee and HR data in one central system
- Reduce manual HR work
- Provide secure access based on user roles
- Build a strong base for future HR features like attendance, payroll, and performance

3. Phase-Wise Development Plan

Phase	Description
Phase-1	Core setup and user management
Phase-2	Attendance and leave management
Phase-3	Payroll automation
Phase-4	Performance management and other features

This document explains only Phase-1.

4. Phase-1 Scope

Included in Phase-1

- Multi-organization (multi-tenant) setup
- Login and authentication system
- Role and permission management
- Employee onboarding and master data
- Basic employee profile and document upload

Not Included in Phase-1

- Attendance tracking
- Leave approval workflows
- Payroll calculations
- Performance reviews
- These features are planned for future phases.

5. Multi-Tenant Architecture Overview

What is a Tenant?

- One organization is one tenant
- Each tenant has its own employees and data

Data Separation Method

- Single database is used
- Every record is linked using a TenantId

Each important table contains:

- TenantId = orgId
- IsActive
- CreatedAt

This ensures that:

- One organization cannot see another organization's data
- The system remains scalable and cost-effective

6. User Roles in Phase-1

Role	Description
Super Admin	Platform owner who creates organizations
Organization Admin	Manages company settings and HR structure

HR Manager
Employee

Manages employees and HR data
Can access only own profile and documents

Super Admin cannot access employee data of organizations.

7. Phase-1 Module Details

Module 1: Foundation & User Management

7.1 Organization Profile Setup

Access: Super Admin

- Create a new organization
- Add company name, logo, website, GST/Tax ID, and address
- System generates a unique TenantId for the organization

This data will be used later in reports and payslips.

7.2 Masters Setup

Access: Organization Admin / HR

Departments

- Create departments like IT, HR, Sales
- Edit or deactivate departments

Designations

- Add job titles with levels
- (Example: Intern – Level 1, Manager – Level 5)

Reporting Hierarchy

- Define who reports to whom
- Used for manager mapping in future phases

7.3 Role & Permission Management

Access: Organization Admin

- Create roles such as HR Manager or Employee
- Assign permissions using a checkbox-based system
- Example permissions:
 - Add employee
 - Edit employee
 - View documents

All permissions work only inside the organization.

7.4 Employee Onboarding Process

Access: HR Manager

Employee onboarding is done using a step-by-step form:

Step 1: Basic Details

- Name, email, phone number, date of birth

Step 2: Job Information

- Department, designation, joining date
- Reporting manager

Step 3: Salary Reference

- Total salary amount (detailed salary setup will come later)

Step 4: Account Creation

- Employee code is auto-generated
- Temporary password is assigned

Employee must change password on first login.

8. Employee Features (Phase-1)

8.1 Login System

- Login using email or employee code
- Forgot password option available
- Secure session-based access

8.2 My Profile

- View personal and job details
- Important details are read-only
- Employee can request profile updates (HR approval required)

8.3 Document Vault

- Upload documents such as:
 - Aadhar
 - PAN
 - Resume
- HR verifies documents and marks status:
 - Pending
 - Approved
 - Rejected

Documents are stored securely under the organization.

9. Security Features (Phase-1)

- Encrypted password storage
- Role-based access control
- Tenant-level data isolation
- No cross-organization data access
- Basic activity logs

10. Technology Stack

Layer	Technology
Frontend	Angular
Backend	.NET Core Web API
Database	SQL Server
Authentication	JWT
Architecture	N-Layer Architecture

11. Phase-1 Deliverables

- Multi-tenant system setup
- Organization and user management
- Secure login and role control
- Employee master data
- Scalable architecture for future modules

12. Conclusion

PMHRMS Phase-1 creates a secure and scalable foundation for a complete HR management system.

The multi-tenant design allows multiple organizations to use the platform safely while keeping their data isolated.

This phase prepares the system for future enhancements like attendance, payroll, and performance management.
